

Electrical Related Fire Investigations

Please consider joining the Fresno Fire Department and CVAI Roundtable 7 for a one-day Electrical Related Fire Investigations course. This course will be presented by Jeremy Davis and Samantha Peek from Fire Investigation Industries.

WHO: Fire Investigators – Public or Private

WHAT: Electrical Related Fire Investigations

WHERE: Fresno Fire Headquarters – 911 H Street, Fresno, CA

WHEN: Thursday, July 21, 2022 – 0800-1600

HOW: \$40.00 per person – Cash or Check at the door

This one-day course will provide professional development through “A Hands-On Approach to Investigating Electrically Caused Failures.” This is a one-day, 8-hour course, that covers the electrical aspects of NFPA 921 and 1033 as it pertains to fire investigations. This interactive and hands-on approach will allow the student to examine electrical failures in a controlled environment and apply their knowledge, skills, and abilities to their fire scenes.

This full day of training will begin with information in the classroom covering various electrical subjects including basic electricity and electrical failures. Most of the day will be focused on outdoor hands-on live demonstrations where the student will be able to observe electrical events not normally seen in person.

All participants will receive a certificate of training after completing the course. Some of the proceeds will support future CVAI Roundtable #7 training events. Coffee and donuts will be provided.
